Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ર્
                                            The protein possesses a hydrophobic domain and so is a secretory protein or a membrane protein. The protein is used as an antigen to prepare antibodies. The polynucleotide sequence is useful as a source of probes for genetic diagnosis. It is also useful as a source of probes for genetic diagnosis. It is also useful for producing the protein in large quantities and for gene therapy. The eukaryotic cells are used for detecting the receptors or ligands corresponding to the protein and for detecting small novel pharmaceuticals. The antibodies are also used for detection, quantification and purification of the proteins. Both the protein and polynucleotide may be used in research or as nutritional sources or supplements. The protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, hematopoiesis regulating activity, tissue growth activity, activity, and tumour inhibition activity, receptor/ligand activity, anti-inflammatory activity and tumour inhibition activity, anti-inflammatory treatments of immune deficiencies resulting from autoimmune disorders or infectious diseases, Parkinson's disease, induce fertility, improve
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated human proteins and polynucleotides are used in research and have activities including cell proliferation/differentiation activity immune stimulating activity and receptor/ligand activity -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC expressed in human tissues) proteins given in AAB36579 to AAB36633. The CC expressed in human tissues) proteins given in AAB36579 to AAB36633. The CC present invention describes an isolated polypeptide (A) comprising an CC amino acid sequence selected from one of 55 amino acid sequences 42-876 cresidues in length, corresponding to FLEXHT- to FLEXHT-55, a 90 % CC identical sequence, and a biologically active or immunogenic fragment of the sequence. The FLEXHT proteins can have antianaemic, anticonvulsant, cC antiarteriosclerotic, immunomodulatory, cytostatic, antiasthmatic, can tinificant antification of the sequence. The proteins can have antianaemic, antityproid, cC antiarteriotic, immunomodulatory, cytostatic, antiasthmatic, can antiprotective, antiarthritic, osteopathic, antiprotatic, antityproid, convergorotective, antiarthritic, osteopathic, antiprotatic antilleer cC and antirheumatic activities, and can be used in gene therapy. The polynucleotide sequences can be used to express the protein sequences. CC pharmaceutical compositions comprising FLEXHT can be used to treat constant and polynucleotides can be used to diagnose and creative including anaemia environment arteriorators and colored to treat the proteins and polynucleotides can be used to diagnose and creative including anaemia environment arteriorators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                 polymerase chain reaction (PCR) primers, and for chromosome and gene mapping, and in recombinant production of [II]. The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. [I] is useful in gene therapy techniques to restore normal activity of [II] or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. [II] and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 á
                                                                        The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed CDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5'
                                                                                                                                                                                                                                                                   New nucleic acid that is a 5' expressed sequence tag (5' EST) obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and diagnostic, forensic, gene therapy and chromosome mapping prodi
                        ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream

                                                                                                   The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleocide sequences given in the specification (or complements) fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S X
                                                                    CC The invention relates to a spatially-addressable set of single exon CC nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting CC from human breast and BT 474 cells. The method involves contacting CC derived from mRNA of human breast, and then measuring the label CC derived from mRNA of human breast, and then measuring the label CC condit to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to CC encode proteins. They are useful for gene discovery, and for CC expression analysis is useful for prognosing breast disease. Gene CC expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater CC diversity of probes for measuring gene expression, with far less bias CC than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The Drobe of the invention present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                       The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from wIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

                                                                                                                                                                                                                                                                                                             measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one sucl probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Penn

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sent invention provides a number of single exon nucleic acid which are derived from genomic sequences expressed in the human frow. They can be used to measure gene expression in bone marrow which may enable the improved diagnosis and treatment of cancers lymphoma, leukaemia and myeloma. The present sequence is a encoded by one of the probes of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                             The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

                                                                         The present invention relates to novel single exon nucleic acid probes (see AAI00010-AAI10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative

RESULT 15
ABG35460
The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived of from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their occupiements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a condicate acid from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung manufactured from human lung from human lung manufactured from human lung manufactured from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lung from human lu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 04-FEB-2000;
